# Letter of Transmittal - Revision E2

## 1. HOLDERS OF PRINTED MANUAL

(1) Check that Revision E1 has been incorporated.

(2) Remove the existing Title page, Introduction-LOEP and Introduction from Vol. 1, and Title page from Vol. 2. Insert the revised Title page, Introduction-LOEP, and Introduction in Vol. 1, and the revised Title page in Vol. 2.

(3) Insert the revision pages in numerical sequence, adding replacing and removing pages as instructed in this Letter of Transmittal.

(4) Record the incorporation of this revision on the RECORD OF REVISIONS sheet at the front of Volume 1.

(5) Retain this Letter of Transmittal and file at the front of the manual.

## 1. INFORMATION

Reissues and revisions are automatically provided to the subscription holders of the manual. Additional publications are listed on the web at http://pubs.hawkerbeechcraft.com. For more information on these publications, or to check subscription status, contact the Technical Manual Distribution Center (TMDC) at 1.800.796.2665 or 316.676.8238, fax 316.671.2540, E-mail tmdc@hawkerbeechcraft.com.

An Interactive Maintenance Library (IML) contains selected Manuals in a digital format. This manual, along with others, is available on CD-ROM. Optional paper copies of the manuals on CD-ROM are available for purchase.

This document is prepared, issued and revised by Hawker Beechcraft Corporation (HBC) for the exclusive use of its customers and is intended to be used for provisioning, requisitioning, storing and issuing line replaceable airplane parts. the contents are proprietary to HBC and its customers and are subject to change. The use of any part of this document by any other person or persons, or for any other purpose without the prior consent of HBC is expressly prohibited. This document is produced to support the configuration of the airplane at the time of delivery to the original customer and does not necessarily reflect the current configuration of any specific airplane.

In addition to this manual and its subsequent revisions, additional maintenance information is published in the form of HBC service bulletins. The information contained in these service bulletins is an intergal part of, and is to be used in conjunction with, the information contained in this manual.

### A. General

The Model 1900D Airliner Illustrated Parts Catalog (IPC) is prepared in accordance with the requirements of ATA 2200 (Air Transport Association of America) with respect to the arrangement and content of the System/Chapters within the designated numbering system. This manual is supplemented by the following publications:

- The 1900 Series Component Maintenance Manual, P/N 114-590021-11
- The 1900D Maintenance Manual, (UE-1 and After) P/N 129-590000-15
- The King Air and Airliner Series Printed Circuit Board Manual, P/N 98-39117
- The 1900D Structural Inspection Manual, (UE-1 and Aftr) P/N 129-590000-65
- The 1900 Airliner Series Structural Repair Manual, P/N 114-590021-9
- The 1900D Airliner Wiring Diagram Manual, (UE-1 and After) P/N 129-590000-13
- The 1900D Airliner Maintenance Manual Supplement, (for airplanes with the FA2100 Flight Data Recorder Installed) P/N 129-590000-109
- The 1900 Series Airliner Corrison Control Manual, P/N CD1140021-197, P/N 114-590021-197

It shall be the responsibility of the owner/operator to ensure that the latest revision of the publications referenced in this manual are utilized during operation, servicing and maintenance of the airplane.

Hawker Beechcraft Corporation expressly reserves the right to supersede, cancel and/or declare obsolete any parts, part numbers, kits or publications that may be referenced in this manual without prior notice.

**WARNING: Use only parts obtained from sources approved by Hawker Beechcraft Corporation, in connection with the maintenance and repair of Hawker Beechcraft Corporation airplanes.**

**Genuine Hawker Beechcraft Corporation parts are produced and inspected under rigorous procedures to insure airworthiness and suitability for use in Hawker Beechcraft Corporation airplane applications. Parts purchased from sources other than those approved by Hawker Beechcraft Corporation, even though outwardly identical in appearance, may not have the required tests and inspections performed, may be different in fabrication techniques and materials, and may be dangerous when installed in an airplane.**

**Salvaged airplane parts, reworked parts obtained from sources not approved by the Hawker Beechcraft Corporation or parts, components or structural assemblies, the service history of which is unknown or cannot be authenticated, may have been subjected to unacceptable stresses or temperatures or have other hidden damage not discernible through routine visual or usual nondestructive testing techniques. This may render the part, component or structural assembly, even though originally manufactured by the Hawker Beechcraft Corporation, unsuitable and unsafe for airplane use.**

**Hawker Beechcraft Corporation expressly disclaims any responsibility for malfunctions, failures, damage or injury caused by use of parts not approved by the Hawker Beechcraft Corporation.**

## B. Correspondence

If a question should arise concerning the care of your airplane, it is important to include the airplane serial number in any correspondence. The serial number appears on the model designation placard. Refer to Chapter 11 for placard location.

## C. Publications Change Request (PCR)

If an irregularity or missing information is noted, the user of this manual may access a PCR form at http://pubs.hawkerbeechcraft.com. Instructions on how to submit a PCR are included on the web page.

## D. Revisions

(1) Paper Revision

That portion of the text which has been revised by addition of, or change in formation, is denoted by a "black bar" adjacent an to the left of the changed item. The date at the bottom of the page indicates when the text was revised. The "black bar" noted with a revision will not be used on a reissue.

(2) CD-ROM Revision

Revised text is not identified.

### E. Variation Numbers

Some parts on the airplane may be identified with -6xx, -7xx, -6xxx, -7xxx, -6 U, -006 U, -0006 U part number suffixes. These suffixes (dash numbers) are used when a part has been produced to a configuration different than to the Engineering. Examples of these differences can include but are not limited to an additional trim allowance, holes undrilled, and assemblies without all the attaching parts or with additional parts. These dash numbers may not necessarily be in the Illustrated Parts Catalog (IPC) therefore, when ordering parts, it is important to quote the part number as found in the IPC.

## 2. MANUAL LAYOUT

### A. Front Matter

(1) Letter of Transmittal

This Illustrated Parts Catalog (IPC) has a Letter of Transmittal (LOT) following the Title page. After any Reissue of this IPC, the LOT will list the page numbers affected by the current revision of the IPC. The listing will indicate whether the pages were added, deleted or changed.

(2) Title Page

A Title page is located at the beginning of the manual and provides the part number of the manual, and lists all airplane models pertaining to this manual and their respective serial numbers. Information throughout this manual is applicable to all serial numbers listed on the title page except where specifically stated.

(3) Record of Revisions

A Record of Revisions page is provided for the purpose of recording revisions inserted into this IPC. When the revision is inserted, the revision number, the date the revision is inserted and the initials of the person(s) inserting the revision should be recorded on this page.

CD-ROM has a Revision status page (on the main menu) that lists the revision standard.

(4) Introduction

This section contains general and specific information on the contents of this catalog. Also, it has specific explanations of the HBC part-numbering system and instructions on how to use this catalog.

(5) Numerical Index

The Numerical Index is a complete alphabetical and numerical (alpha/numeric) listing of all part numbers contained in the Parts List of this IPC. The index is divided into two sections, "Numerical Index-Alpha" and "Numerical Index-Numeric." The first section contains part numbers whose first digit is an alpha character and the second section contains part numbers whose first digit is a numeric character. Entries in these indexes refer to the Chapter, Section, Unit, Figure and Item Number (CSUFI) in the Parts List.

Common hardware items having more than ten locations, are listed in the Numerical Index without locations and with a total quantity representing all locations unless the total quantity is greater than 999, where "AR" is listed.

CD-ROM versions of the IPC do not have the alpha/numeric list incorporated. The CD-ROM software incorporates a search feature that will permit searches using either the part number or part description.

(6) Effective Pages and Table of Contents

The Effective Pages following each chapter divider tab lists a summary of all Chapter-Section-Unit-Figure and Page numbers, with the current effective date for all pages applicable to that chapter. An asterisk (*) preceding the entry indicates that the page has been added or revised by the current revision.

The Chapter Table of Contents following the Effective Pages is sequentially arranged in Chapter-Section-Unit and Figure number order. The airplane effectivity is also listed.

## B. Organization

This IPC is organized in accordance with the Air Transport Association (ATA) Specification No. 2200 format. The contents are organized into five levels as follows:

**(1) Chapter** - Identified by yellow divider tabs. The various groups are broken down into major systems such as Environmental Systems, Electrical Power, Landing Gear, etc. Each system is assigned a chapter, which becomes the first element of the standard numbering system. The element "28" in chapter 28-40-10-01 refers to the chapter "Fuel." Everything concerning the fuel system will be covered in this chapter.

**(2) Section** - The major systems of an airplane are broken down into subsections, and are identified by the second element of the standard numbering system. The element "40" of 28-40-10-01 identifies the "Indicating" portion of the fuel system.

**(3) Unit** - The individual units within a subsystem/section may be identified by the third element of the standard numbering system. The element "10" of the number 28-40-10-01 is a subject designator. This element is assigned at the option of the manufacture and will not necessarily agree with any other manual.

**(4) Figure** - Figures are the final definition of the breakdown system. The element "01" of 28-40-10-01 represents the figure of the parts list. Some installations or assemblies may be good only for certain airplane serials. These figure locations break up the installations or assemblies so they can be listed for just the airplane serials they effect.

**(5) Item** - The items are the numeric value in the Fig. Item column on the text page assigned to the part number. This number corresponds to the number in the Illustration. If however, the item number has a dash (-) preceding it, that part is a non-illustrated item in the list. Example: 110 would be illustrated and -110 would not.

# 3. DETAILED PARTS LIST

The Parts List consists of installations broken down into assemblies, sub-assemblies, detail parts and attaching parts.

## A. Column Breakdown

(1) Figure and Item No. Column

This column contains the figure number, of the illustration that shows the parts and the item numbers that locate the parts on the illustration. Parts not illustrated will carry a (-) before the item number.

(2) Part Number Column

This column contains the part number assigned to each part.

(a) Long Part Number (Overlength Part Number)

When a part number exceeds 17 characters, the part number column will have either a reference/coded part number (RACREF) or '+#' at the end of 17 characters and the complete manufacturer's part number will then be shown in the nomenclature column. That is the part number to use when requisitioning replacement parts. Refer to Figure 1, item 7.

(b) Dash Numbers

A part number (i.e., -1) in the Illustrated Parts Catalog may appear, when ordering a part through RAPID, as a -1, -01, -001 or -0001. These dash numbers are considered equivalent and identifiers of the same part.

(3) Nomenclature Column

(a) Indenture

For proper identification of details of assemblies, the listings employ the indention system. Each installation or assembly is broken down to the next indentation to the right. Conversely, the next higher indentation for an installation or assembly for any detail is listed above it.

1 2 3 4 5 6 7

Installation

. Detail parts for installation

. Assembly

. Attaching parts for assembly -------*-------

. . Detail parts for assembly

. . Sub-Assembly

. . Attaching parts for sub-assembly -------*-------

. . . Detail parts for sub-assembly

(b) Left and Right Handed Parts

If two assemblies are made up of a majority of identical parts, or the assemblies are opposite, (i.e., left and right hand), the assemblies are listed together with their detail parts listed as common for both assemblies. In this case only the left or right hand part, but not both, is illustrated, with the difference between left and right hand parts noted in the description column.

(c) Attaching Parts

Attaching parts are listed immediately after the assembly or detail part they attach. An opening separation symbol, ATTACHING PARTS, followed by a closing separation symbol, -------*-------, distinguishes the listing of attaching parts from a subsequent listing of parts with the same indention. Refer to Figure 1, items 1 through 4.

(d) Nomenclature Qualifiers

The following qualifiers are used in the nomenclature column:

1 **Alternate** - Identifies the part number of an interchangeable part.

2 **Spare** - A preferred replacement part.

3 **True Part Number** - Indentifies the part number listed in the correct format to be used for ordering the part. Refer to Figure 2.

4 **Pre** - Indentifies those parts that were used prior to the incorporation of a kit or service bulletin.

5 **Post** - Identifies those parts that are used after the incorporation of a kit or service bulletin.

6 **Rotable Item** - Identifies to the user that the part is a candidate for procurement as either, overhauled, repaired or new.

(4) Effectivity Column

If the Usable On Code column lists an alpha then that will indicate the effectivity. Refer to the end of the parts list of that particular figure to determine the effectivity of the alpha. Each figure has its own distinct coding, i.e., the code number denoting airplane serial effectivity for one figure may not be the same as it is for another. The range consists of 10 digits showing a five digit serial number where the effectivity starts and a five digit serial number where the effectivity ends. If no alpha is listed in the column, then the effectivity for the figure (and all its items) will be for all airplanes. The following table shows an example of the range representation:

| "USABLE ON CODE" Column | Effectivity (at the end of figure) | Airplane(s) |
|---|---|---|
| A | UE001-UE009 | UE-1 thru UE-9 |
| B | UE001-UE099 | UE-1 thru UE-99 |
| C | UE001-UE003 | UE-1 thru UE-3 |
| D | UE001-UE009<br>UE042-UE074<br>UE078-UE999 | UE-1 thru UE-9<br>UE-42 thru UE-74<br>UE-78 and after |
| FE | Figure Effectivity | All airplanes for the figure |
| No alpha code listed | None listed | All airplanes |

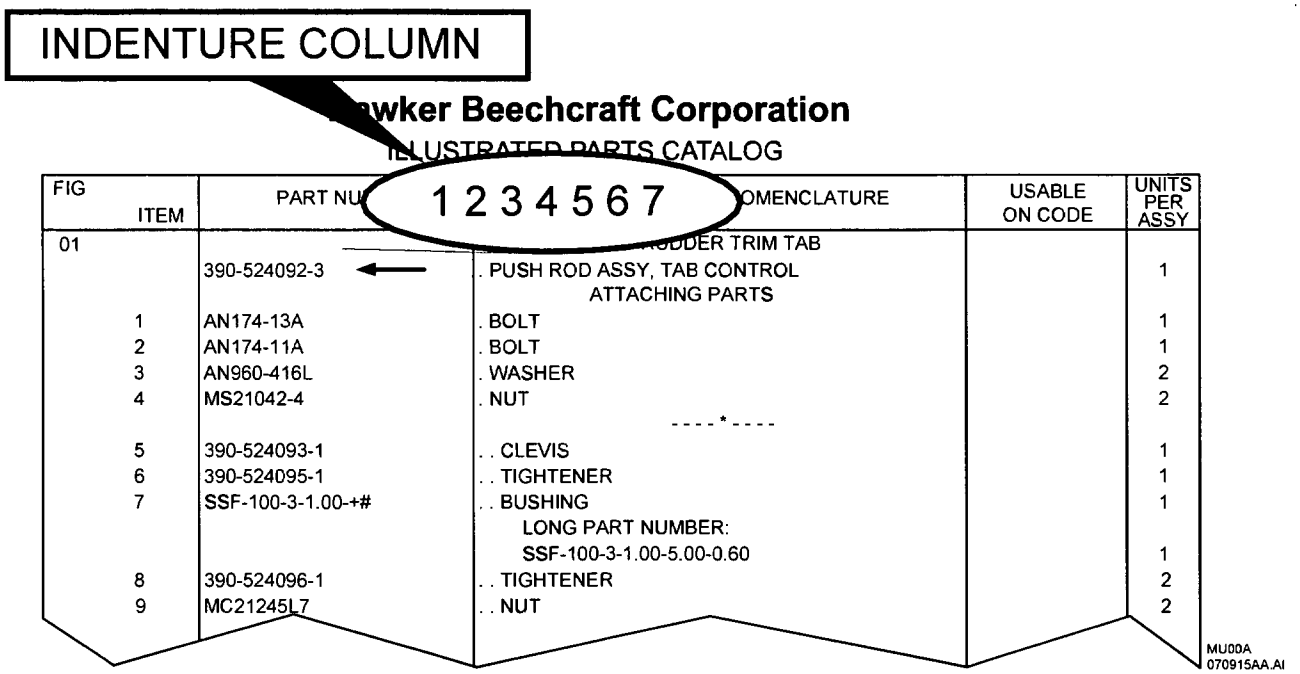
(5) Units Per Assembly Column

This column lists the quantity of the units required for the next higher assembly of the part. The quantity of attaching parts is the quantity required to attach one unit (piece) of the part they attach. The notation "RF" in the "Units Per Assy" column indicates that the part number is "Reference" only. The notation "AR" indicates that part is "As Required" and indicates the parts vary in the number required to properly build the assembly.

## 4. HOW TO USE THIS CATALOG

Figure 1 is an example that shows the indenture system used to indicate parts included in any given assembly. **These part numbers are only examples**. By this indenture system, parts shown in column 2 are component parts of the immediately preceding assembly in column 1. Parts shown in column 3 are component parts of the immediately preceding assembly in column 2, etc., through column 7. As an example, if the 390-524092-3 assembly is ordered, it would include items 5 through 13. Note that items 1 through 4, bolts, washers and nuts (the attaching parts) are not a part of the push rod assembly.

There may be instances when a part number consists of more than 17 characters. In that case the complete number will appear in the nomenclature (refer to item 7). The examples in Figures 2 and 3 show how to locate a part when the part number is known and how to locate a part number when the description is known.



| FIG ITEM | PART NU | OMENCLATURE | USABLE ON CODE | UNITS PER ASSY |
|---|---|---|---|---|
| 01 | | UDDER TRIM TAB | | |
| | 390-524092-3 | . PUSH ROD ASSY, TAB CONTROL | | 1 |
| | | ATTACHING PARTS | | |
| 1 | AN174-13A | . BOLT | | 1 |
| 2 | AN174-11A | . BOLT | | 1 |
| 3 | AN960-416L | . WASHER | | 2 |
| 4 | MS21042-4 | . NUT | | 2 |
| | | ----*---- | | |
| 5 | 390-524093-1 | . . CLEVIS | | 1 |
| 6 | 390-524095-1 | . . TIGHTENER | | 1 |
| 7 | SSF-100-3-1.00-+# | . . BUSHING | | 1 |
| | | LONG PART NUMBER: | | |
| | | SSF-100-3-1.00-5.00-0.60 | | 1 |
| 8 | 390-524096-1 | . . TIGHTENER | | 2 |
| 9 | MC21245L7 | . . NUT | | 2 |

**Figure 1**
**Indenture**

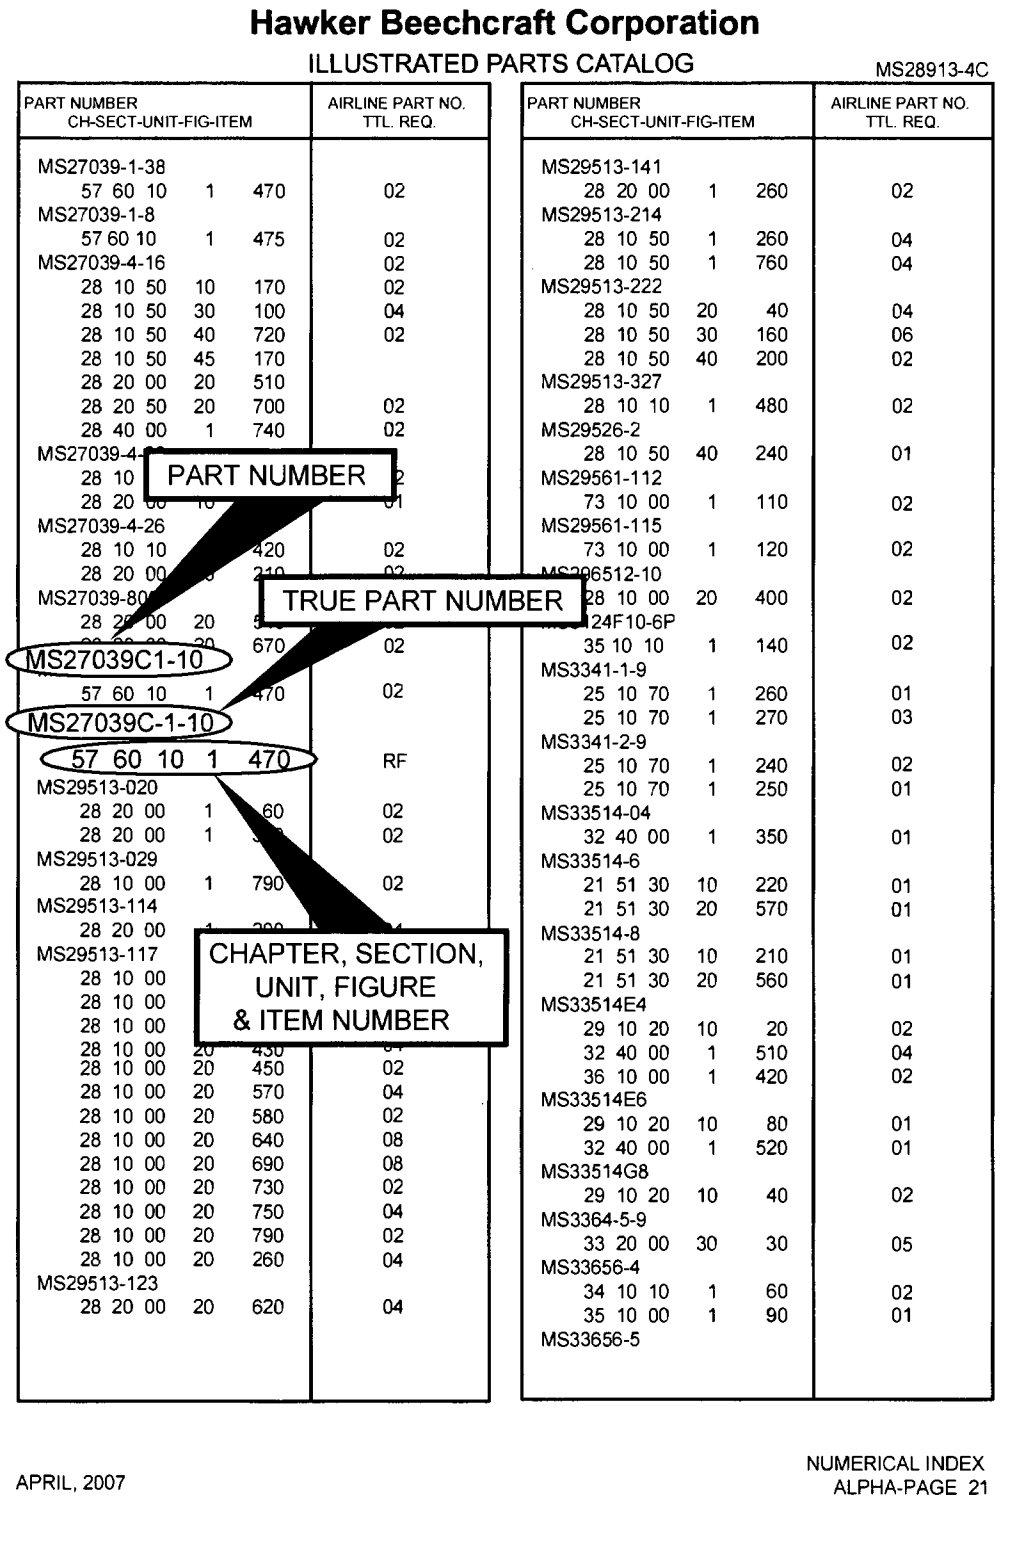


**Figure 2**
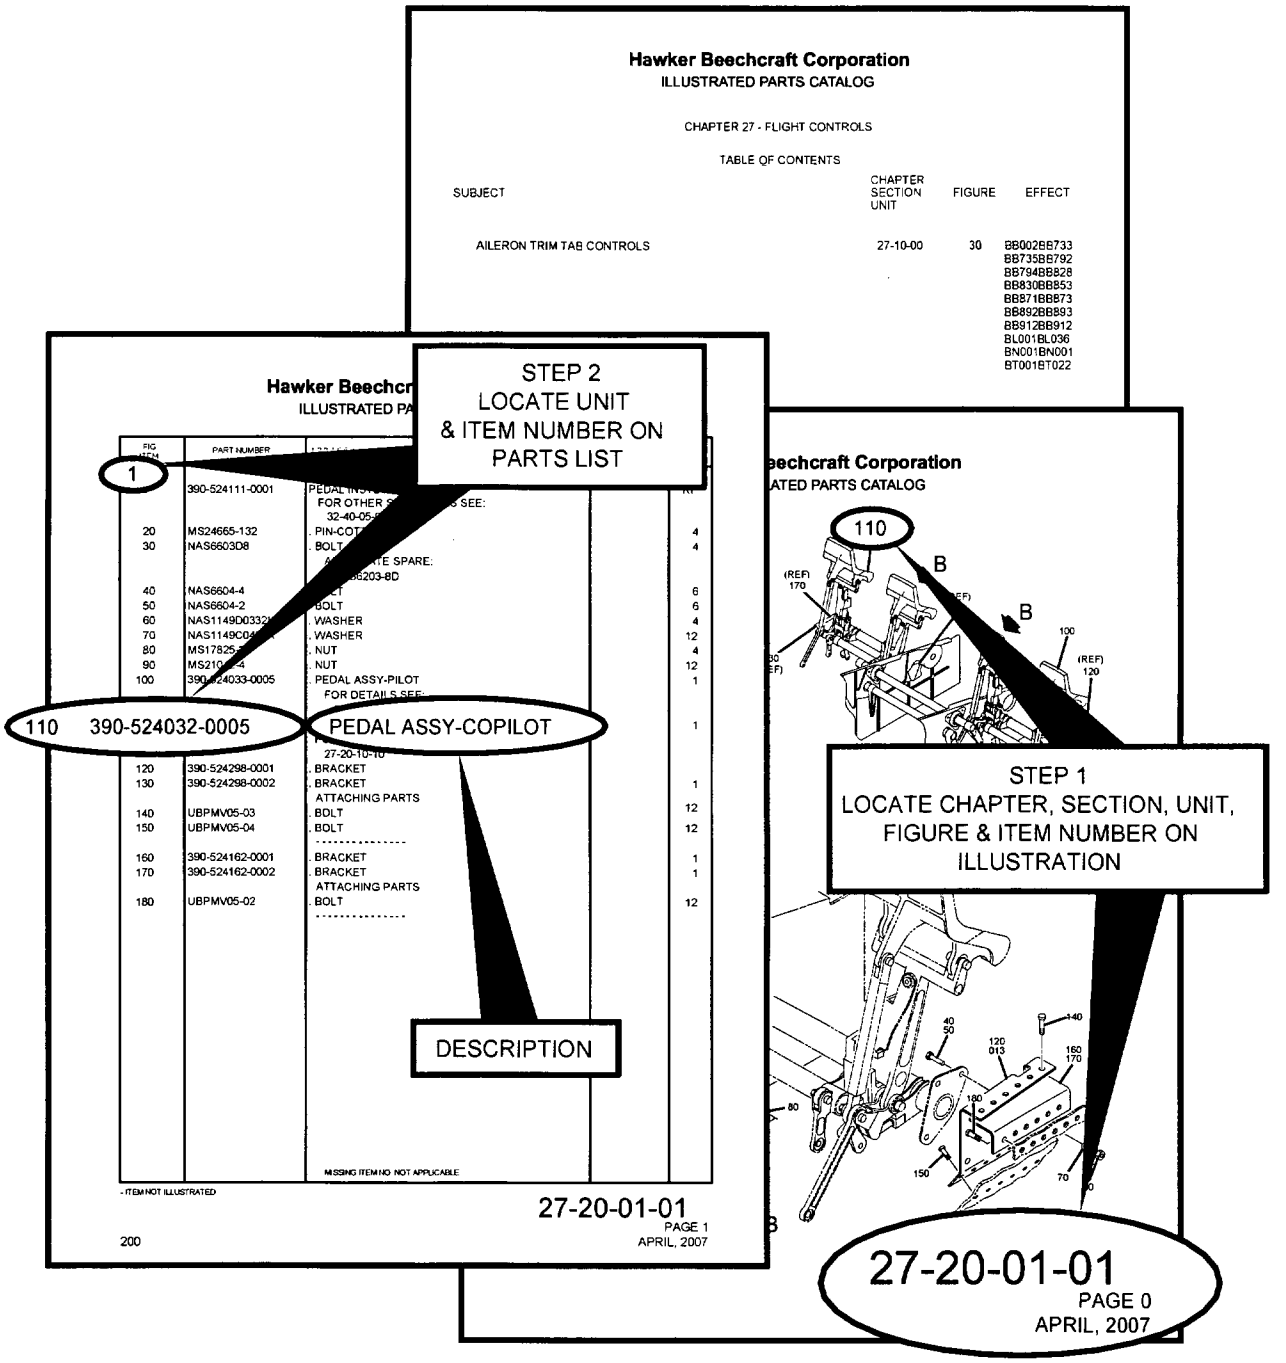
**How to Locate a Part when the Part Number is Known**



Consult the table of contents in front of the appropriate chapter for the applicable section and figure in which the part is listed. Immediately preceding the listing of parts is an illustration (refer to step 1 in the example shown above). The item number adjacent to the illustrated part will appear in the listing of parts in the column entitled "fig item" (refer to step 2 above). Immediately to the right of the item number will be found the required part number.
